

Dungeon Clix

BASIC DUNGEON

SAGABORN.COM

What is DungeonClix?

Dungeon Clix is a 3d dungeon terrain system made to enhance tabletop maps. These easily configured walls and terrain click together quickly to give any map a 3d look.

HOW TO USE IT

DungeonClix are STL files made for 3D printing.

We print ours on a Bambu P1S with the following settings:

- .4 Nozzle
- Layer Height: .16
- Wall Loops 2
- Infill 15%
- Infill Grid
- Support Tree (auto)

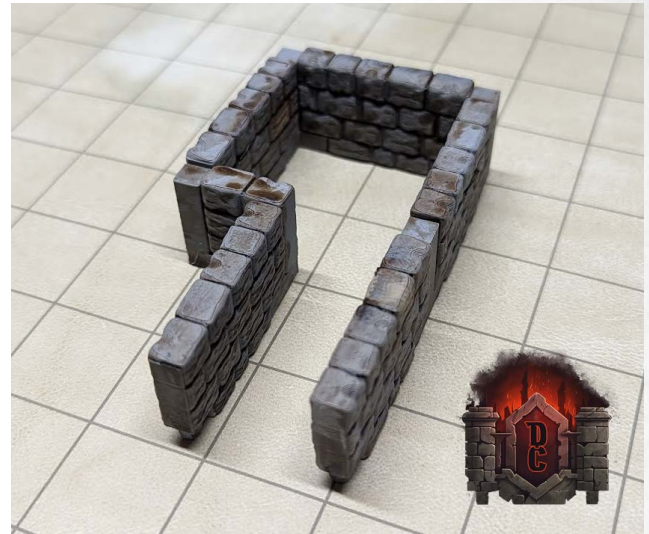

We have successfully printed all components without Supports, but it is recommended to get the best print.

The Basic Dungeon Kit comes with:

- 2" Wall Section
- 1" Wall Section
- 7 connectors
- Stand-alone Steel Door

DungeonClix are made to fit a 1" grid when using any corner connector. The connectors offer a full variety of configurations, but to fit the 1" grid, the "pillar" part of the connector must be in the center of the grid.

The only exception to this rule is when you are making narrow hallways. Since the width of the walls makes most minis too large for a 1" hallway, you use a "Narrow Hallway Connector" which allows the walls to sit outside the 1" space, giving room for the base of most 32mm miniatures.
